What Is Reverse Image Search?

Reverse image search is a method that allows you to find out where an image has appeared on the internet. Instead of typing words into a search engine, you upload an image or paste its URL. The tool then scans the internet to find other websites that have the same or similar images.

This is helpful when you want to:

- Check the original source of an image
 - See who else is using your image
 - Find higher resolution versions of an image
 - Identify fake accounts using your profile photo
 - Discover copyright or plagiarism issues
